

Essential Attributes [TexturePreview]

The [TexturePreview] attribute enhances the display of serialized Texture or Sprite fields by showing a real-time image preview directly in the Unity Inspector — similar to how materials preview textures by default.

Key Features

-  Displays an inline **preview** of Texture2D or Sprite fields.
 -  Shows the **asset path** below the field for quick location reference.
 -  The path and preview are **clickable** to ping the asset in the Project window.
 -  Optional parameter to **hide the path** display (visiblePath = false).
 -  UI design matches Unity's native Inspector styling.
-

Visual Example

In this example:

- Each texture or sprite field shows a **thumbnail preview**.
 - The **asset path** is shown beneath each preview (unless hidden).
 - The layout is grouped using standard Unity headers and tooltips.
-

Example Usage

```
[TexturePreview]
public Texture2D icon;

[TexturePreview(visiblePath: false)]
public Sprite minimalSprite;
```

Or in context:

```
[Tooltip("Main icon displayed in the UI.")]
[SerializeField, TexturePreview]
private Texture2D mainIcon;

[Tooltip("Thumbnail used in the inventory grid.")]
[SerializeField, TexturePreview]
private Sprite itemThumbnail;
```

Parameter: visiblePath

You can optionally hide the asset path using the `visiblePath` parameter:

```
[TexturePreview(visiblePath: false)]
public Texture2D iconWithoutPath;
```

Inspector Behavior

- A **live preview** of the selected texture or sprite is displayed to the right of the field.
 - If `visiblePath` is `true`, the **asset path** is shown below the field and clickable to ping the object.
 - The layout is cleanly embedded in the existing Inspector, without breaking Unity's native UI.
 - Fields remain fully assignable and editable like normal object references.
-

Intended Use

The `[TexturePreview]` attribute is ideal for:

- Previewing UI icons, inventory sprites, or visual assets.
 - Avoiding misassignments when dealing with many similar-looking textures.
 - Improving asset clarity in teams with designers and level builders.
